

Analysis

First of all, data is trained using images taken from various resources, especially from drones.

1. First is a screenshot when a clean road image is fed into the system, so below is the result.

```

Garbage Dataset

Result: Tensorflow with GPU (NVIDIA GeForce 950m) took 3.40 minutes to train the data of (6958 images) with 1000 steps, testing (Evaluation Time) is 1.160 seconds.

Training images: 250

Testing image: 800

After the analysis, we have made an analysis table, table 3 comprising an analysis table.

No of experiments	No of training images: All 5 categories are trained	Types of testing images: taken from the various resources: drone, internet, mobile	Result after evaluation: Probability
-------------------	---	--	--------------------------------------

1	6558	Garbage Dataset:400	Garbage dataset 0.9999995 Potholes dataset:4.35966e-07 Clean roads 4.2900403e-08 Small potholes 3.220000e-07 Less garbage 2.44444542e-09

Analysis of accuracy of the system is given below,

Phase	Training %	Testing %	Accuracy of the system
1	20	80	71.33
2	30	70	74.1344
3	40	60	79
4	50	50	77.45
5	60	40	84

6	70	30	85.72
7	80	20	93.03
8	90	10	97.543

Below is a better view of the table above.

After the training is done if the waste is detected, a message is sent to the worker, there will be an image id and location and if the location has garbage then the message is being sent to the worker. The table below will clear the picture.
